

Facilities Management Software

Challenges and Opportunities

In today's ever-changing world, maintaining efficient and cost-effective building operations is a widely recognized necessity. However, the challenges that you face as a facilities manager can be numerous. Space, personnel, and asset management; on-demand maintenance requests; and access to accurate, up-to-date floor plans are just a few examples. Decreased staff and budgeting resources only magnify these difficulties. Let CADapult provide you with a turnkey solution to improve your company's workflow and reduce building operation costs.

Make it Integrated

Our innovative solutions automate workflow to enhance communication and streamline activities to optimize resources. We deliver customer satisfaction through increased accessibility, productivity, and profitability through Web, Database, AutoCAD, and Revit tools. CADapult addresses functions like space, personnel, assets, leases, work orders, and preventative maintenance, while linking with other systems, such as your HR program. This integration eliminates entry of redundant and inaccurate information, providing the highest level of accuracy and data integrity.

Keep it Simple

CADapult FM has been providing facilities management solutions to small, medium and large corporations, government agencies, hospitals, and other institutions since 1985. Our easy-to-use, low-cost solutions can be installed on your servers or hosted from ours. Modules may be purchased individually or as an entire suite, which we often implement in less than a month. This combination of software and implementation methodology maximizes your return on investment.

Turn it Green

CADapult FM software incorporates sustainability into the management of your facilities. Our solutions can assist your company's preparation for LEED-EB certification with tools for assessment, analysis, and documentation, allowing you to consolidate your data in a central repository.

SCALABLE SOLUTIONS

Revit® Integrator **New!**

Take advantage of building information modeling (BIM) and sustainable design in managing your facilities. Seamlessly integrate with other CADapult applications to enhance coordination between architect, builder, and facilities manager. All functionality of our AutoCAD Integrator is available in the Revit Integrator.

AutoCAD® Integrator

Manage space, personnel, and assets more efficiently through seamless database integration. Generate numerous graphic queries and reports and integrate with other FM modules and internal systems. Track unlimited amounts of data through user-defined fields.

Web Room Scheduler

Schedule meeting facilities that accommodate your specific requirements, such as capacity, availability, equipment, and supplies. Request single or recurring events, room layout reconfiguration, and audio-visual coordination. Integrate with Microsoft Outlook.

Web Asset & Inventory Manager

Track your assets and assign them to locations within your buildings or warehouses. Generate detailed and summary reports. Carry out complex asset moves in a timely, more efficient manner.

Web Data Center Manager

Track and report on data center components, rack locations, electrical usage, system capacity, and BTU output. View floor plans over the web and easily identify equipment and associated specifications.

Web Facilities Assessor

Survey, assess, and locate deficiencies in your facilities' architectural and engineering systems. Prioritize projects and costs and plan for corrective measures.

Web Lease & Real Estate Manager

Manage real-estate portfolios more efficiently so that you can make better business decisions, mitigate risk, and enhance communication and performance. Tenants and real-estate service providers can view critical data anytime and anywhere over the web.

CADapult FM Green **New!**

Determine the environmental impact of your maintenance and operational performance. Discover savings from space consolidation, vacancy reductions, equipment replacement, utility usage & hoteling. Set realistic sustainability goals, develop a green strategy, and measure the progress of your action plan.

Web Floor Plan & Report Viewer with Data Editor

Communicate and manage unlimited, password protected data on space, personnel, and assets throughout your company. View vacancies, cost centers, and other graphic queries without AutoCAD or Revit. Generate standard reports on space and personnel or customize reports according to your needs.

Web Move Manager

Streamline the workflow process for effective single and domino move management with automatic conflict resolution and department notification. Access move requests, approvals, schedules, vacancies, in-process work orders, and closed work-order history. Reduce costs and company disruption and always ensure up-to-date floorplans.

Web Daily Maintenance & Facilities Request Manager

Requesters, managers, and technicians can process daily maintenance requests in a few simple steps. Improve overall maintenance operations through priority status assignments, response time tracking, and accurate cost analysis.

Web Preventative Maintenance Manager

Plan and budget for ongoing maintenance costs and activities to avoid costly repairs. Create single and recurring tasks to process work-orders and track parts and labor more efficiently.

Web Emergency Preparedness Manager

Be prepared so you can respond to and recover from natural or man-made disasters. Centralize critical information so emergency personnel can perform rescue, recovery, and other field operation tasks.

What our clients say about us

“CADapult has streamlined our space allocation process, giving us the necessary tools to provide the information to all who require it in a comfortable format. My job has become so much more efficient that I no longer dread compiling those quarterly reports! CADapult FM effortlessly provides the same data in half the time!”
