

1

The screenshot displays the AutoCAD 2012 software interface. The main drawing area shows a wireframe model of a rectangular object with a yellow circle highlighting a specific corner point. A yellow arrow points from the text 'first point i pick' to this circle. The Properties palette on the left provides details for the selected object, including its center coordinates and dimensions. The command line at the bottom shows the sequence of commands entered: *Cancel*, *Cancel*, cxy, Pick coordinate point:, and Pick text location:.

Command: *Cancel*
Command: cxy
Pick coordinate point:
Pick text location:

2

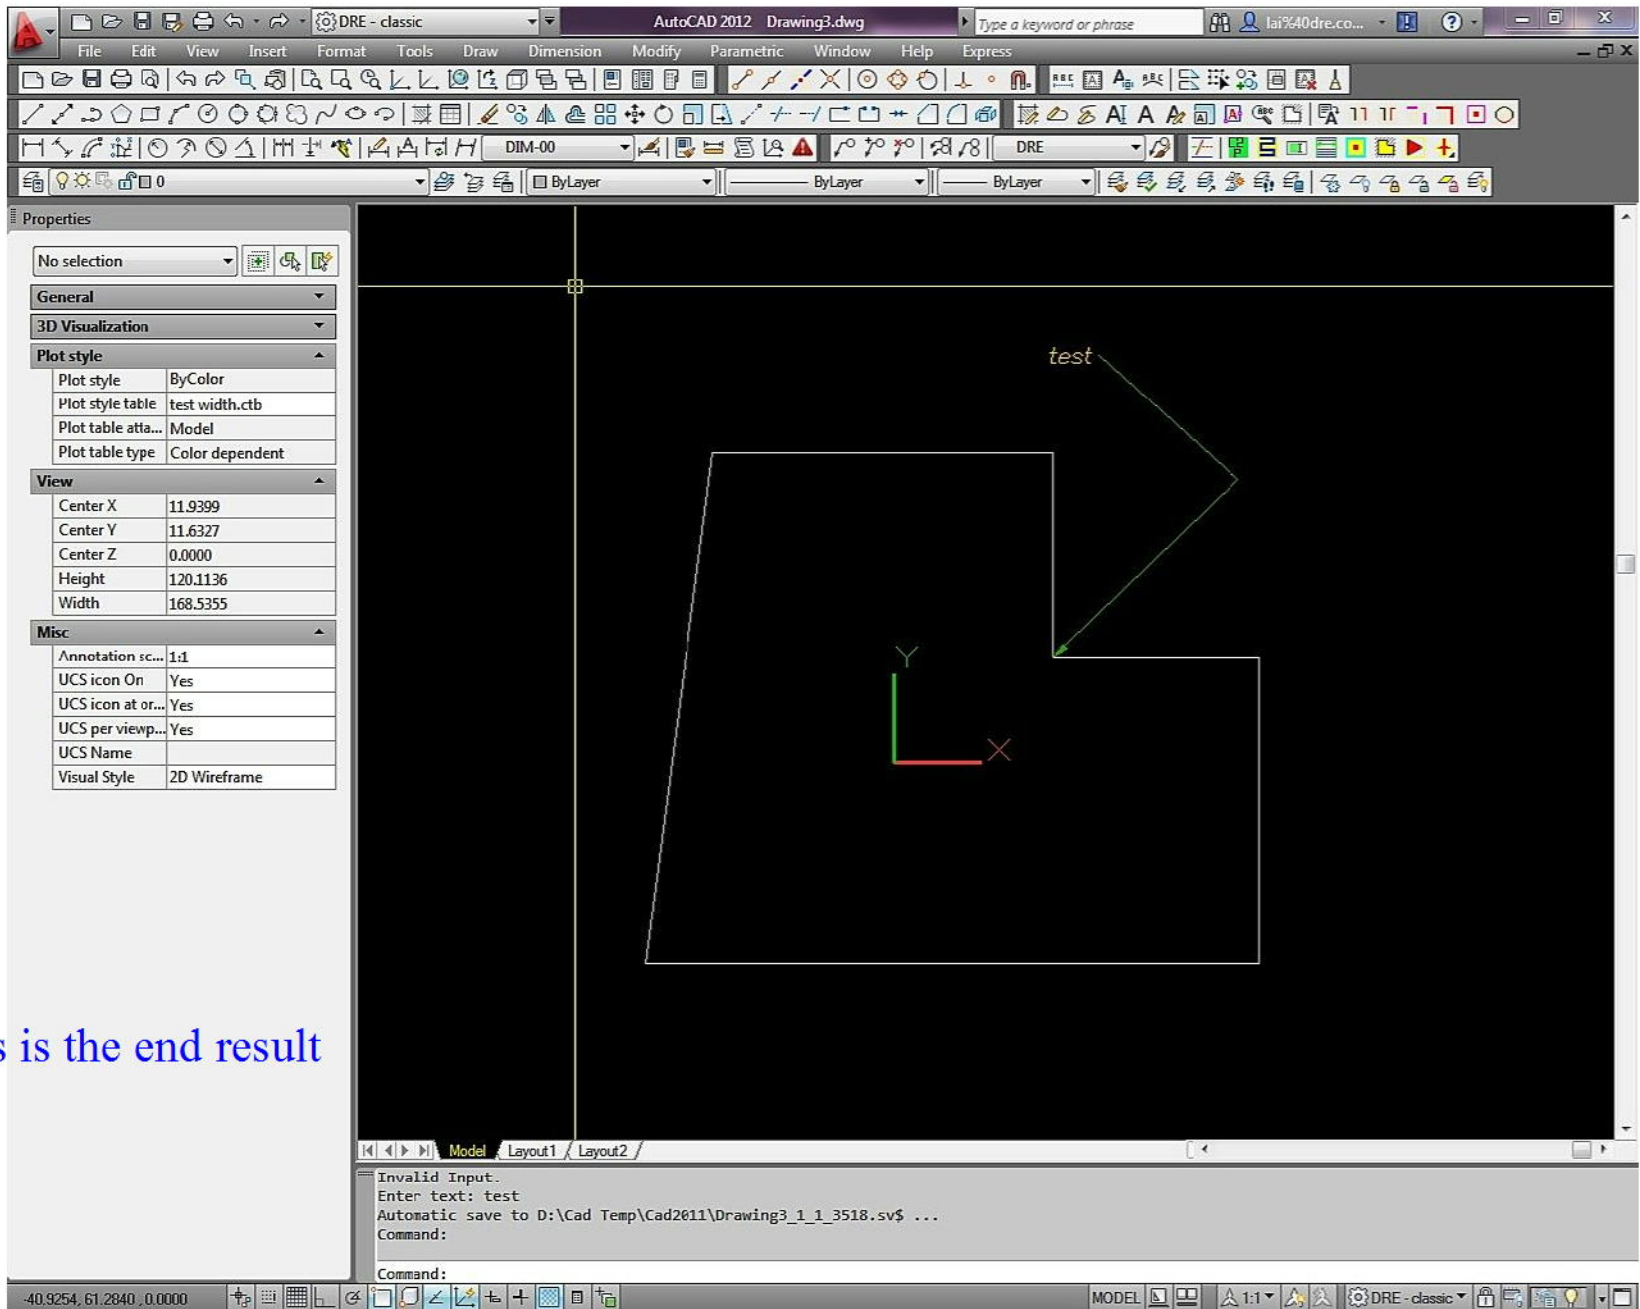

This is what i mean it said invalid input after i pick the 2nd point.

3

The next 3rd point i pick, it will ask me to enter text instead of direct post the coordinates

4

this is the end result
