Original group 1. Walls are set to floor to floor.

Original group 1 was copied to 2nd, 3rd, and 4th floors.

Notice the heights of the walls do not change.
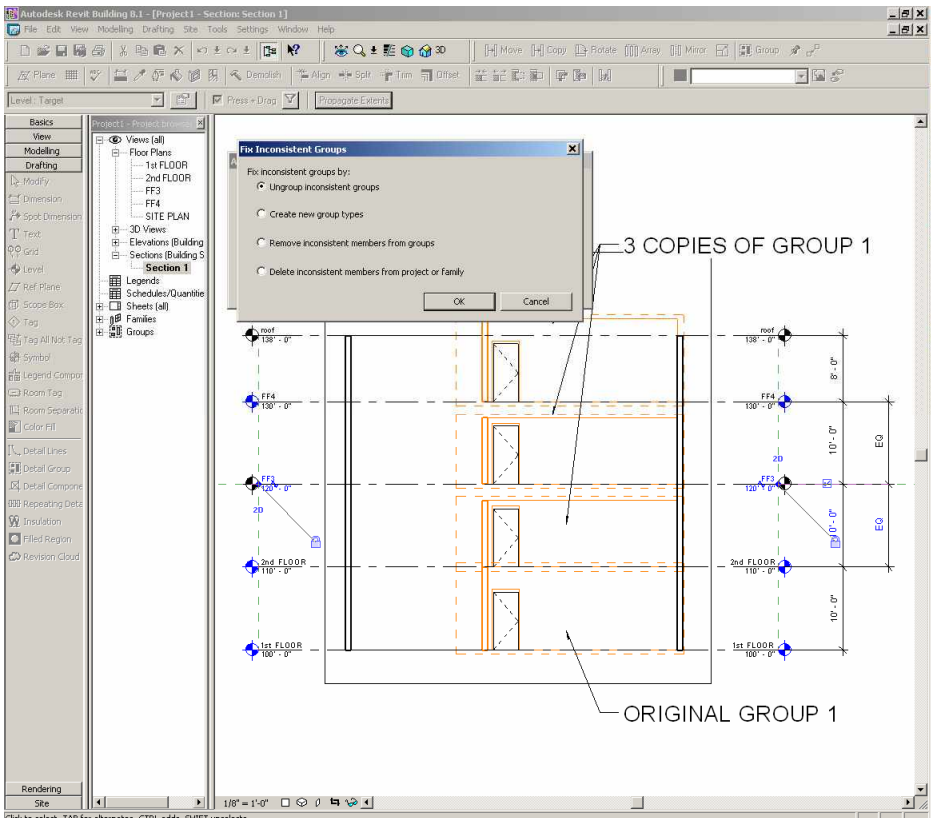

Sure "Fix Group" what could it possibly do.
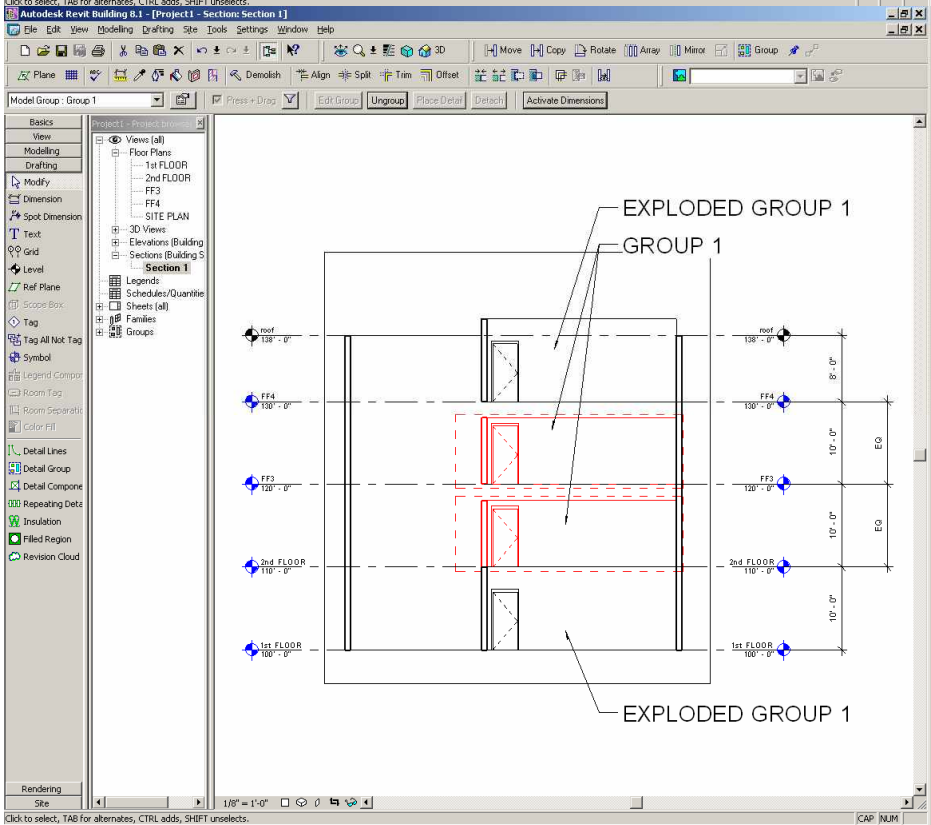

Create new group types.

The original group 1 was renamed to group 2. Why can't it leave my group 1 alone???
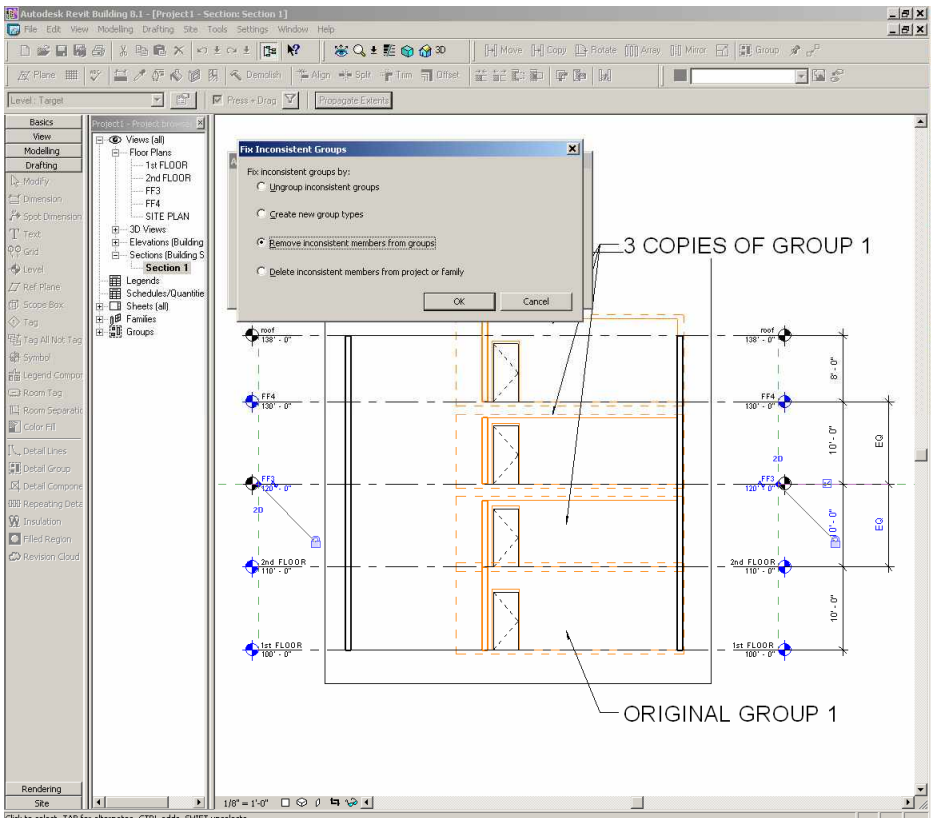

Note the walls are set to floor to floor but there is a -2'-0" on the top offset.
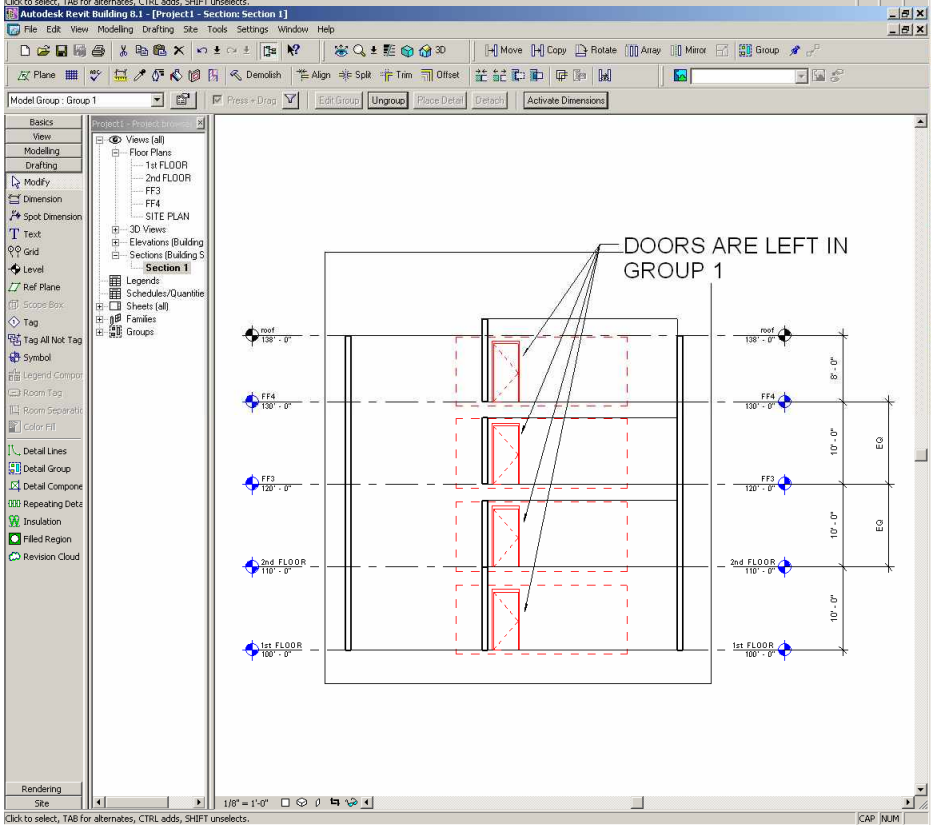

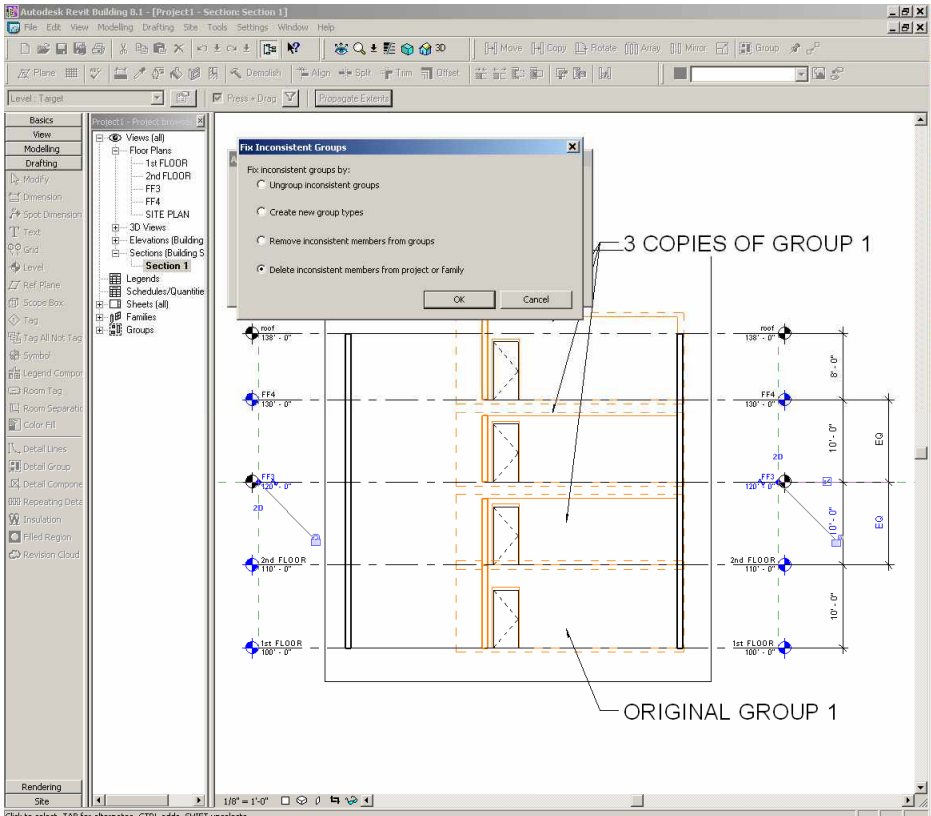

Ungroup inconsistent groups.

3 COPIES OF GROUP 1

ORIGINAL GROUP 1

Fix Inconsistent Groups

Fix inconsistent groups by:
- Ungroup inconsistent groups
- Create new group types
- Remove inconsistent members from groups
- Delete inconsistent members from project or family

[OK] [Cancel]

Just left the group 1 objects. But it is not the original group 1!!! If you investigate the remiaing group 1 walls you will see that they are still set floor to floor but have a -2'-0" top offset. This is frustrating!!!

EXPLODED GROUP 1

GROUP 1

EXPLODED GROUP 1

Remove inconsistent members from groups.

Just the doors were left in the groups. Not very helpful.

Delete inconsistent members from project or family

Everything was ERASED
