

Question:

Having Revit 2012 or 2013 we have installed another version of Revit (2014) in my system. We have been facing a problem when modifying any object (i.e. ceiling, roof etc.).

Problem:

Disabled the Boundary Line option (Tick and cross) for floor creation

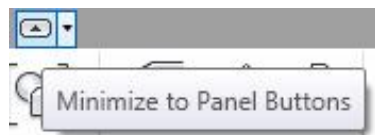

Boundary Line option are disabled

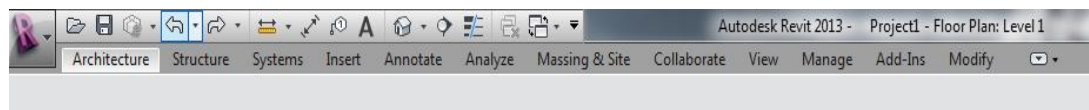

Temporary Solution:

It can be overcome by clicking **Minimize to Panel Buttons**

1. First, close all the tool bar by clicking 3 times on the **Minimize to Panel Buttons**

2. Then click on the **Minimize to Panel Buttons** to ON the all toolbars

Need Permanent Solution:

Whenever we are opening a new session of Revit 2012/2013 or jump to another view (i.e. floor plan view to ceiling plan view) we are facing the same problem, please let us know any permanent solution.
