API Error when checking out library files from vault.

I createt a program that checks out files from the vault, to synchronize some properties in the inventor files. But when a part inserted from a library I get an error (E_NOINTERFACE) what can be wrong. All other parts and assemblies are checked out fine. See pictures.
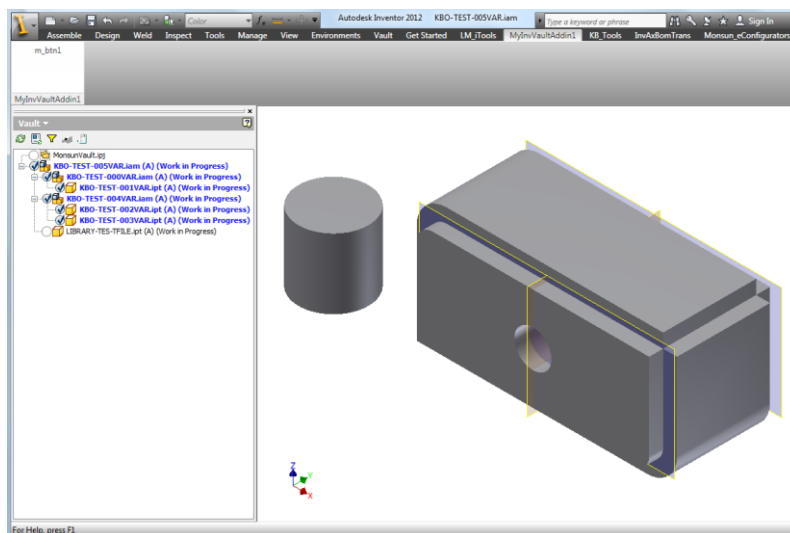

When I right click the part in the browser and select checkout the part from the library is checked out fine.

Any suggestions on how to solve this? Please help.

Error here.

The rest of the files are checked out fine.
