Notice to our customers

1

In a continuing effort to provide high quality products, Autodesk has released Autodesk Simulation Moldflow Synergy - User Interface 2014 Service Pack 2 (SP2), which fixes or addresses a variety of issues pertaining to the 2014 release. This README file highlights what has been fixed.

NOTE Service Pack 2 for Autodesk Simulation Moldflow Insight - Solvers can be downloaded from the Autodesk Subscription Center.

Requirement

Autodesk Simulation Moldflow Synergy - User Interface 2014 must be installed before you can apply SP2. SP2 can then be installed directly, regardless of whether Service Pack 1 has been installed, since SP2 includes all fixes from SP1. If you have a language pack installed, select the relevant language from the Options dialog before installing SP2. If you do not select the language prior to installing SP2, the user interface will appear in English. To change the user interface language, select the relevant language from the Options dialog.

Summary of issues that have been addressed in Service Pack 2

2

- 1 Dual stack IPv6/IPv4 networks are supported for 64-bit Windows systems and also Linux 6 systems running at least version 6.1.
- 2 When using Vault to store files, models can be imported, the analysis sequence can be changed or cancelled, and the changes will be saved, as expected.
- 3 All surfaces are now included, when importing IGES files on non-English operating systems that use a comma as the decimal separator.
- 4 The **Create Mold Block** function works as expected, when applied to a freshly meshed, imported CAD model on a non-English operating system that uses a comma as the decimal separator.
- 5 The Report Wizard works as intended when generating an html format report.
- 6 Mesh density can be set on CAD bodies, as in previous versions.
- 7 Modulus values reported in custom modulus plots are in the expected range.
- 8 Custom deflection plots can be created without the need for specific parameters to be entered.

Known issues

3

If you are using an AMD GPU card, depending upon the computer security settings, it is possible that an error similar to this may be thrown:

```
Command-line error: cannot open error file  
"C:\Windows\TEMP\OCL43EA.tmp.log": not a regular file
```

To prevent this error message you will need to acquire full access to the

```
C:\Windows\temp
```

directory to which the GPUs need full access. To get full control of this directory, click on the

```
C:\Windows\temp
```

directory in Windows Explorer, and follow the prompt.

Alternatively, you can select the GPU option: **DO NOT USE GPU**
