There are three things you need to check:

1. If the login user is in administrators group, if not then added login user to administrators group

through "Advanced" Tab Control Panel ► User Accounts ► Control Panel Home User Accounts Change your account picture | P Give other users access to this computer | P Change account type System and Security Network and Internet Windows CardSpace Manage Information Cards that are used to log on to or Hardware and Sound User Accounts Programs Credential Manager Users Advanced User Accounts Manage Windows credentials Use the list below to grant or deny u Appearance and Mail (32-bit) Personalization computer, and to change passwords Clock, Language, and Region Users for this computer: Ease of Access

User Name

zhangchar

esssrv

Domain

ADS

MELSG6352S

Add login user into Administrators group

2. Check DCOM local security policy

Make sure Administrators group of local machine has the right to access and launch the DCOM.

After above settings are all set, mitsi.exe should be able to start by Inventor. (I have tried if I uncheck "Local Launch" and "Local Activation", when I click "select material" I'll have that error message)

If it's still not working, make sure mitsi2011.synergy can be launched and activated by Administrators.

1) from window start type in dcomcnfg.exe

2 wait until Component Services window appears then from DCOM Config to check if mitsi2015. Synergy is in the list

Regards, Charlie
