

With 0.4 ID, 0.5 OD Tube (tube turned off during fluid analysis)

11 dead elements, 1 dead node
No velocity in "blue" areas

Unsteady state. 58% Tet mesh, automatic refinement points. 0.003 Velocity and Pressure Norm. Perform max iterations. Convergence tolerance 0.01. This looks good!

Heat rate through face looks real low. Transient heat transfer

How are these turned off?
