

plot area gap = 1 and it works well for when we run with two columns

grid padding has no effect on moving the labels, i tried 0, 1, and 10 and the labels didn't move. (maybe due to not having a section view grid)

grid from plot style, no grid displayed in section view style, our whole sheet has grid

label from section view style

label from section view style

I want the sections to start at a 1 major offset. In plot style there is no option for an offset. (I moved the bottom 2, the rest are default location)

In short. The only way I can think to have the offset on the left is to put the grid in my sheet dwt, and then start my viewport at the second grid. Sorry my major grid don't show very well.
