I use AutoCAD Map 2013-64 bit and AutoCAD Civil 3D-64 bit on my 64 bit Windows 7 Pro.

Thank you. That information is always helpful. I misunderstood your original post.

I want to say it is a global problem of all AutoCAD series products

----

In some sense. Yes. Manipulation of large data sets can be a difficult process. Some strategies are discussed [HERE](#).

 I want be know, is there any Audodesk technical specialist in this forum

----

This forum is not officially monitored by Autodesk employees. Some may participate from time to time on their own initiative. I don't believe Autodesk is working on a fix since they view it as a workflow issue.

Some of the recommendations for workflow can help. Things like using Xrefs and Drefs extensively. Also don't keep any cogo points in the surface drawing than you have to. Most should be kept in an external file and [added to the surface](#) that way.
