Milestone Scripting Problem

We have a requirement to change the workflow state of a milestone via scripting at a certain point in a workflow. The workflow is shown below;

Milestone with 'Workflow State' of '[04] Closed' created by script by the 'Submit for Review' transition

THIS IS WORKING!

If the workflow 'Cancel Report' transition is used then the 'Workflow State' of the milestone (see below) needs to change to '[99] Cancelled'

THIS IS NOT WORKING!

New Report Initiated

[01] Preparing

Reject

Submit for Review

Reject

[02] Under Review

Cancel Report

Accept Report

Cancel Report

[03] Accepted

Close Report

Cancel Report

[99] Cancelled

[04] Closed

View in Gantt Chart

Workflow State	Milestone event	Target Date	Status	+/- days from Target Date	Warning days before	Workflow Progress (%)	✕
[04] Closed	Enter state	31/01/2013		- 24d	7	100%	☐

▼ Current Milestone List

Workflow State	Milestone event	Target D...
[99] Cancelled	Enter state	31/01/2...

I think I should be able to use the following in my script to change the 'Workflow State' of the milestone from '[04] Closed' to '[99] Cancelled' as illustrated;

```
item.milestones[0].setWorkflowState('[99] Cancelled');
```
