Required clean-up after an uninstall for R11 Beta

Before re-installing a later R11 build, it is required to follow this process for a clean uninstall of R11. The following process is used by our QA team:

1.   Uninstall Autodesk Inventor Professional 11 using Add/remove programs.
2.   Uninstall any Standard Content Libraries (if an add/remove programs entry exists)
3.   Uninstall Autodesk Data Management Server 5.0
4.   Uninstall Microsoft SQL Server Desktop Engine (AUTODESKVAULT)
5.   Delete "C:\Program Files\Autodesk\Data Management Server 5.0" folder if it exists.
6.   Delete "C:\Program Files\Microsoft SQL Server\MSSQL$AUTODESKVAULT" folder.
7.   Delete "C:\Documents and Settings\All Users\Application Data\Autodesk\VaultServer" folder.

Note: For x64 Operating Systems, "Program Files" becomes "Program files (x86)"
