

After Ipart is created, under the Manage tab, under the Author Category I hit Component in order to add the part to the Content Center.

The first option is to select the category for this part. The available categories are shown in figure 1.

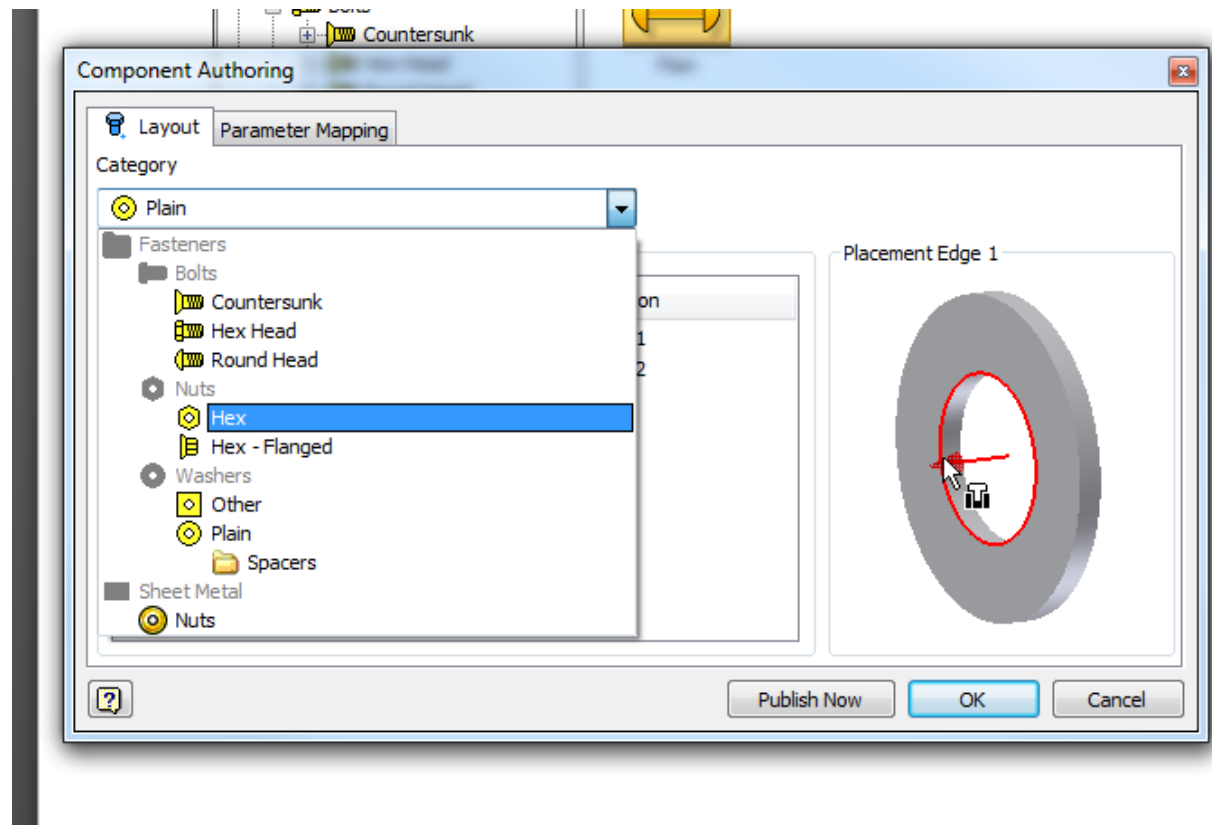

Figure 1: Categories available in Content Center

As seen in Figure 1 the Rivet family is not an option. However as shown in Figure 2, on the next page, the Content Center editor has a Rivet category.

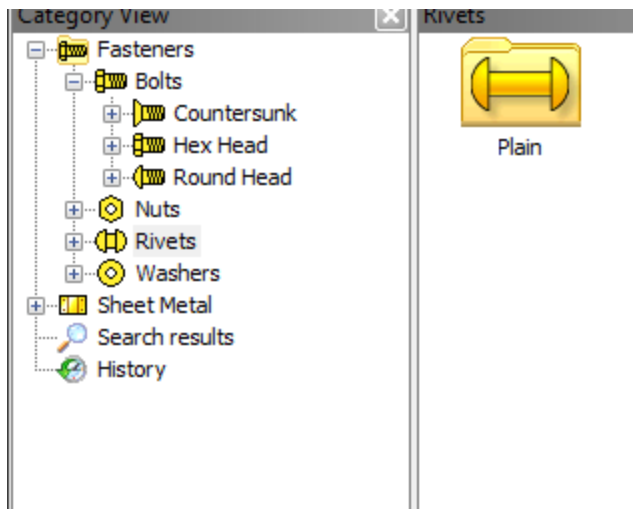

Figure 2: Content Center Editor Categories

As shown in Figure 2 the Content Center has a default Rivet category, but how do you add effective parts to this category.

So next I tried to go through the component section by selecting another component to switch over to the rivet category midway through the publish process. The Publish Guide Category option is shown in figure 3, on the next page.

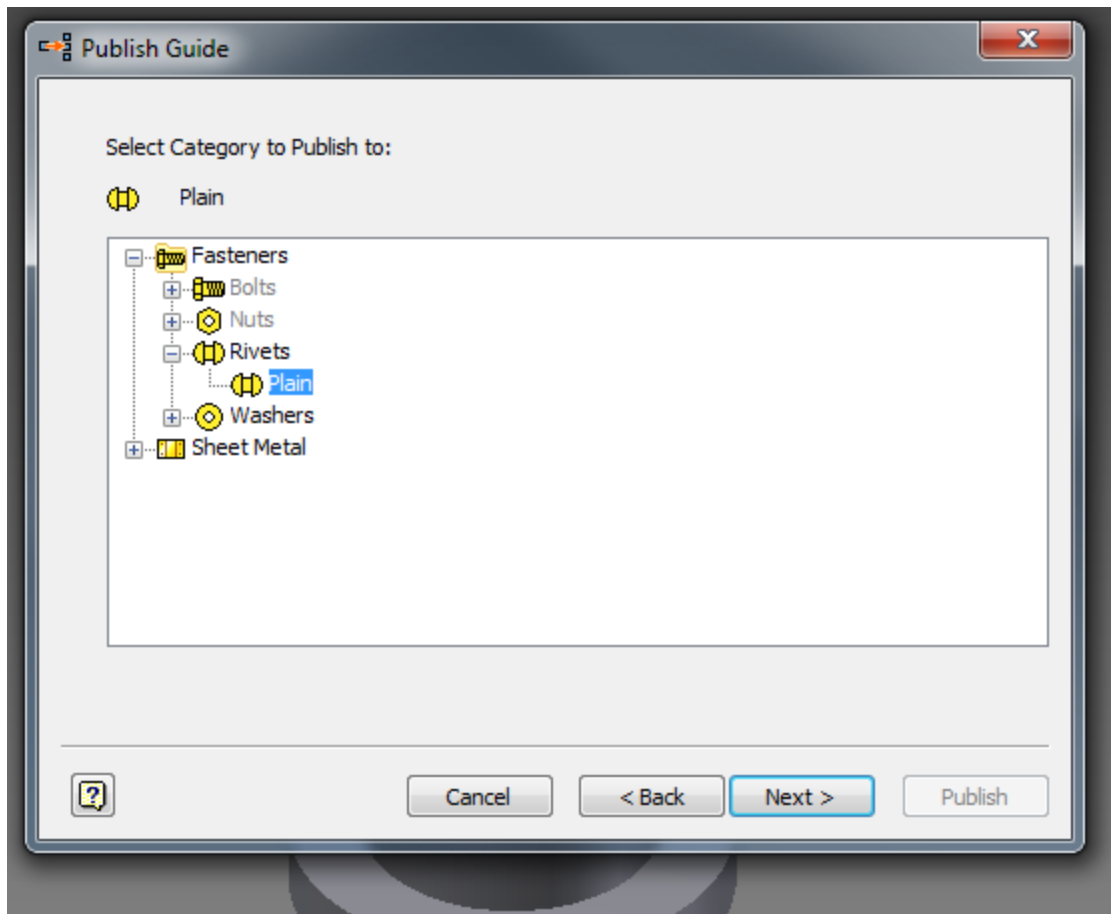

Figure: 3 Publish guide

But upon completing the publish part by selecting the rivet, as shown in Figure 3, the 'Auto drop' function of the content center WILL NOT work by using this 'work around'.
