

I've opened my ipt.

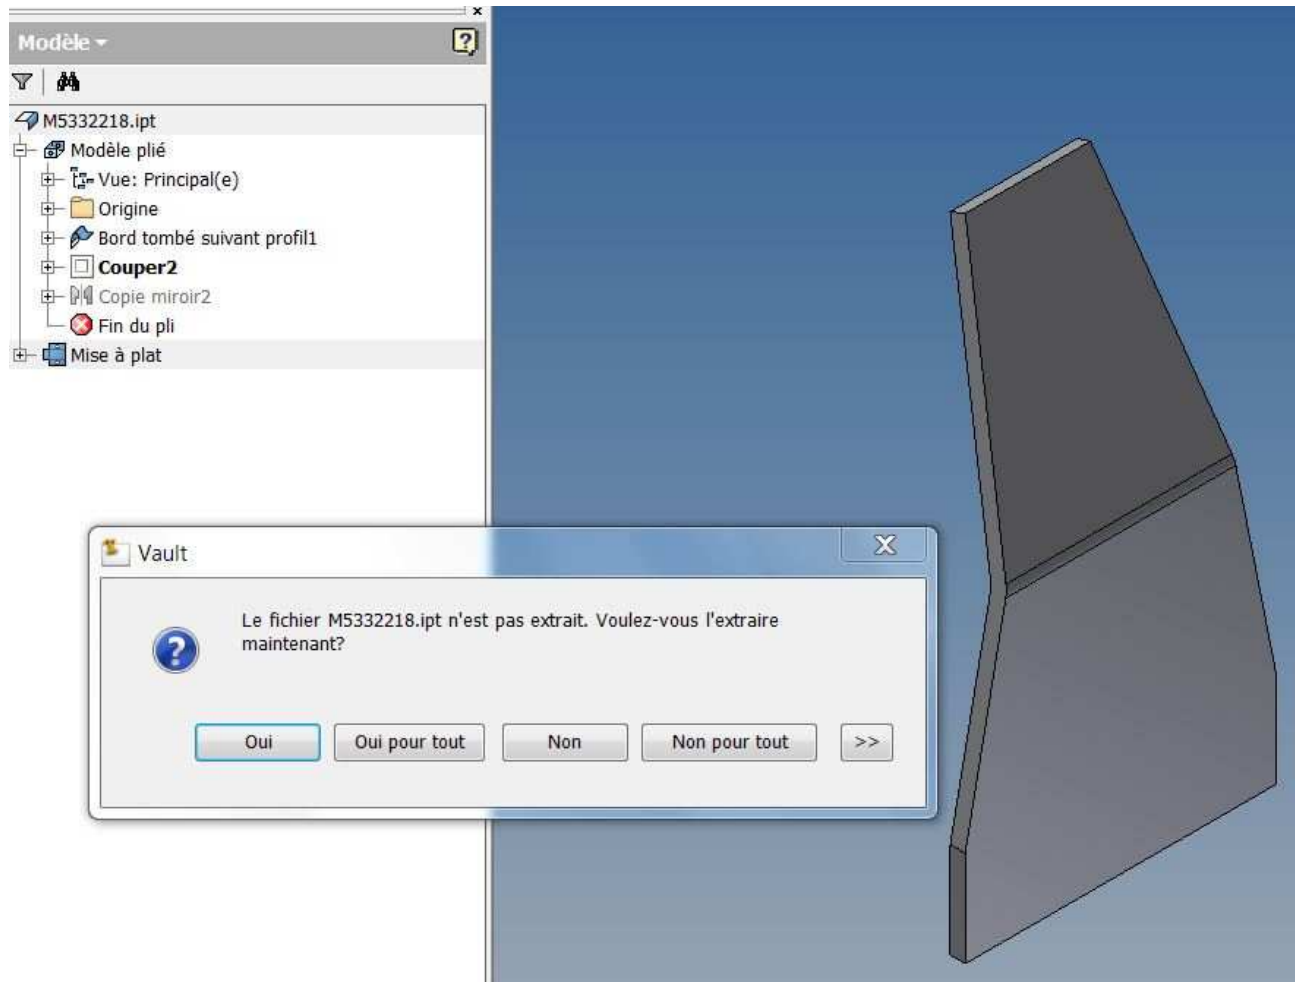

As you can see in Vault ipt is free (not extract/ unlock)

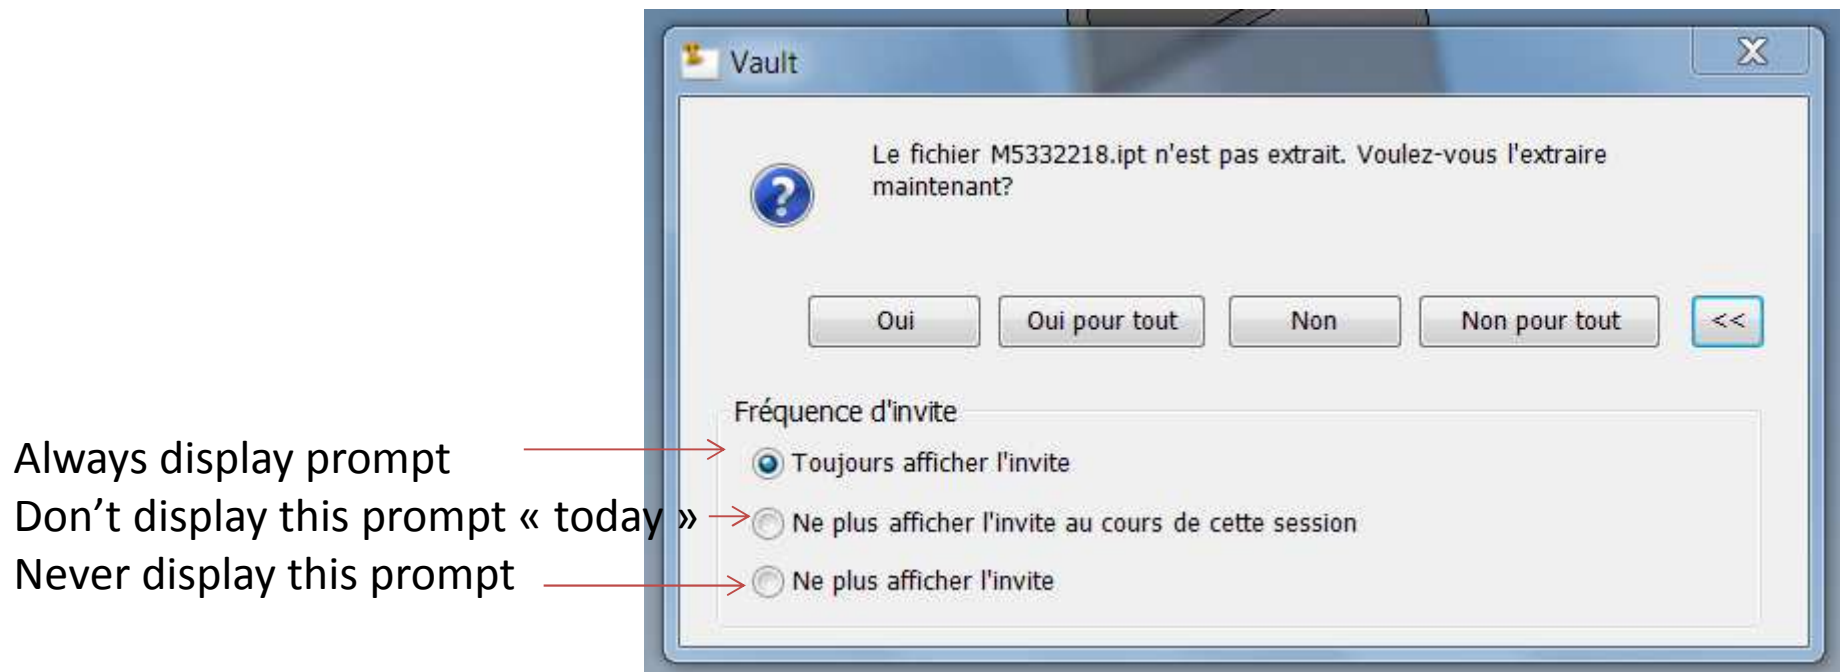

I want to modify the cutting function for example by changing the thickness of cutting off

When I clic « apply » after doing my changes normally this prompt displays saying:
« The files MXXXX is not extract (free /unlock from vault).
Would you like to extract it (no free / lock in vault) »

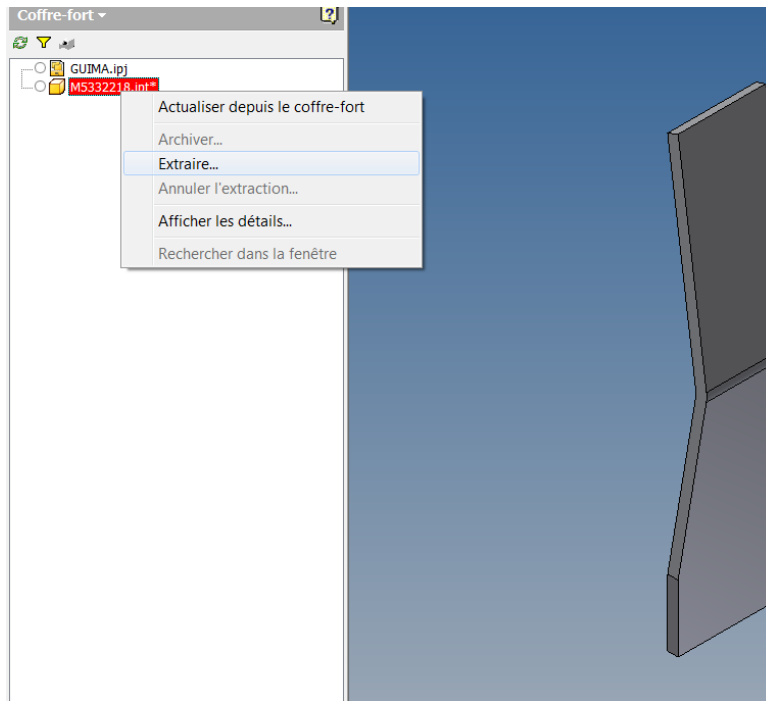

At this prompt, my colleagues choose the third solution before doing a clic on OK

So, now he never have this prompt, and if he want extract /lock a part from vault he have to It manually

So, now he never have this prompt, and if he want extract /lock a part from vault he have to it manually
