This displacement occurs every time I plot something.

And it happens with ALL drawings: both new and old.

It happens only when I plot something, and does not happen when I work in model or layout space using OSNAP for any type of objects.
1. A simple rectangle has been drawn.
2. After the required plot settings are selected, I chose "Window" from the "What to Plot" menu...
3. I was prompted to specify the first corner. I'm specifying the lower left corner of the rectangle...
4. Then I was prompted to specify the opposite corner - it is the upper right corner of the rectangle... And as you can see, the OSNAP function was turned on all the time...
5. For now everything is ready for printing, I just have to click OK button... But, I press the "Window" button again and...
6. has been returned to the model space, where the plot area is shown by the white space...
7. When I zoom in to the lower left corner of the rectangle, I see that the white space is displaced from the lower left corner of the rectangle, as shown above...
8. and of course, the same situation with the upper right corner...
