I am also having the same issue, I don't think it's only affecting hatches, for me it's affecting everywhere. Only the solutions I found is DELCONS command and select "ALL" press ENTER. It's a temporary solution, after couple of commands the bloody shitt will come again. Frustrated very much, see the attached video, I have 2 rectangle here with red and green color, I am trying to move the green rectangle to up direction, and see how it's affecting the red one. It is not only affecting moving commands, but also Stretching, Copying everything. Since Windows 7 and Auto CAD 2014 we all drafters in the company have this issues. We had 2010 version, that did not had any issues. In fact we were using Windows XP at that time. Then the company decided to upgrade the OS with Windows 7, Auto CAD Upgraded with 2014. Problems started. Any solutions?

Thanks

BK
